

AN5352N

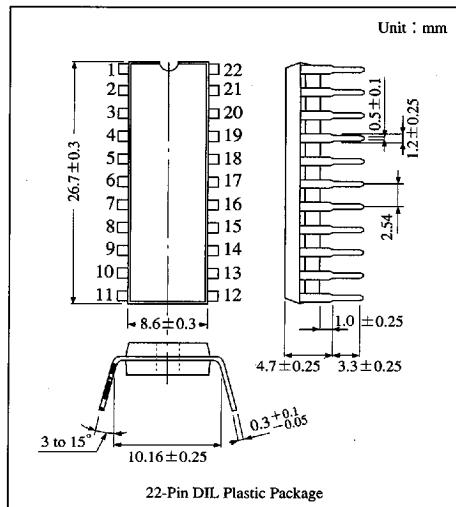

Character and Pattern Interface IC

■ Overview

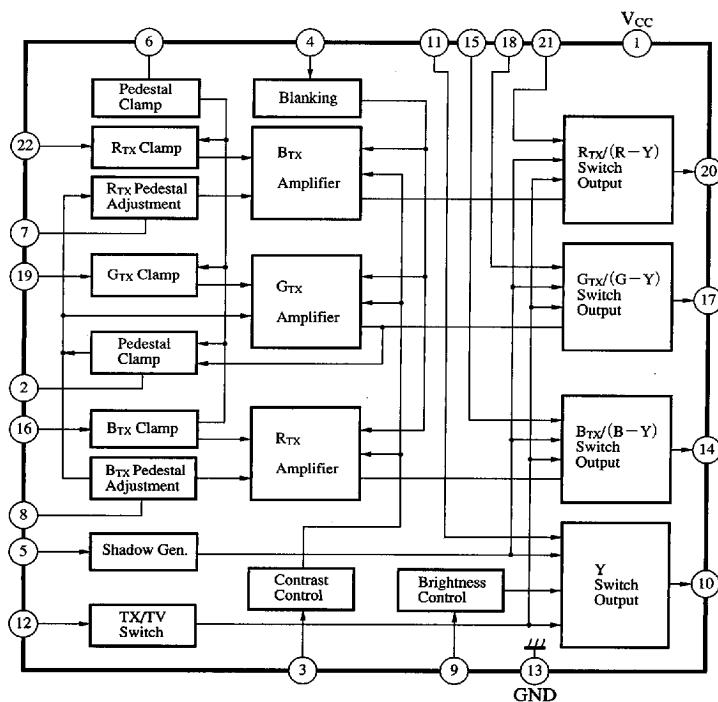

The AN5352N is an integrated circuit designed for interface between the color output stage and the teletext system decoder output, or external analog input signal.

■ Features

- The AN5352N provides analog signal processing for character signal input
- High speed switching
Rise and Fall time···35ns, Delay time···20ns
- Including DC controller of Brightness, Contrast, R-adjustment and B-adjustment for character signal input
- Y amplifier linear area's bottom···2.0V

TX-TV signal input level standard	TX/TV ₁		0	—	6.0	V

■ Input/Output Pulse Waveform

- The rise/fall time of P.G ① to ⑤ should not exceed 5ns.
- Rise/fall time is enlarged in the period corresponding to P.G ① and P.G ⑤ output waveforms.
